

# Driver usage query

This query is to identify all the distinct Users and the drivers and version of the driver used within the last 6 months. The importance of this query is to check if there is any driver or user that is using a version that could be not recommended or not within the minimum requirement for Snowflake use.

## Account Usage 6 month distinct driver type, version and user usage

```
select distinct user_name,reported_client_type,reported_client_version from snowflake.account_usage.  
login_history  
where reported_client_type not in ('SNOWFLAKE_UI','OTHER')  
and event_timestamp > dateadd('month',-6, current_timestamp())  
order by 2,3,1;
```
