Account Usage Retention

Objective:

Account Usage in Snowflake is a group of views that dispalys information regarding the account.

These views deplay information to up to a year of data, so the objective is to maintain this data in your Snowflake account within physicalized tables.

Tasks:

We will use tasks to schedule the needed queries to maintain the data in the table and only insert the deltas from the Account Usage views.

You can find the objects, the DDL, and the task creation in the spreadsheet attached below.
